32. ***Valuation Methodology***

The method adopted for valuation of the residential premises is **Sales Comparison Method** in which the sales instances of the similar properties or properties with similar attributes in the same region are traced and the Market Rates are derived by using the experience and expertise of the valuer. Also, the valuation of the residential premises is based on the Market Value of the premises depending on the condition, location and other infrastructural facilities available at and around the said premises.

We have considered the valuation on Built-up area for the premises, which is identified in the Index II.

The Market Value obtained in this report is defined as follows: Market Value is the estimated amount for which an asset could exchange on the date of valuation between a willing buyer and a willing seller in an Arm's length transaction after proper marketing wherein the parties had each acted knowledgeably and without compulsion. (As defined by the international Valuation Standards Committee, London). Thus, the characteristics of Market Value are -

a) It is a free will sale.
b) It is an estimated amount and not a predetermined or an actual sale price.
c) It is time-specific as on the given date.
d) It depends on purpose of valuation.
e) Buyer & seller are actuated by Business principles. They are unrelated and are acting independently.
f) Asset would be exposed to the market in the most appropriate manner to affect its disposal at the best price possible.

The Realizable Value of the said residential premises is considered at **90%** of the Market Value of the said premises, while the Forced Sale Value for the said residential premises is considered at **80%** of its Market Value.
